

VARONIS® DATADVANTAGE®

Features and Benefits

Increased data protection

- A single view of user/group/data relationships, including access permissions and how they were assigned or inherited

Data Usage Auditing

- Granular data use audit information, down to the file level. Reports can be generated for any given time interval and sent on a custom defined schedule

Adaptive Data Authorization

- Accurate recommendations about who should be removed from having access to a given data set based on their usage patterns and business need

Reduction in IT burden

- Continuously updated intelligence about users, groups, permissions, and data access reduces IT workload

Varonis DatAdvantage® for SharePoint

Controlling Access to SharePoint Data

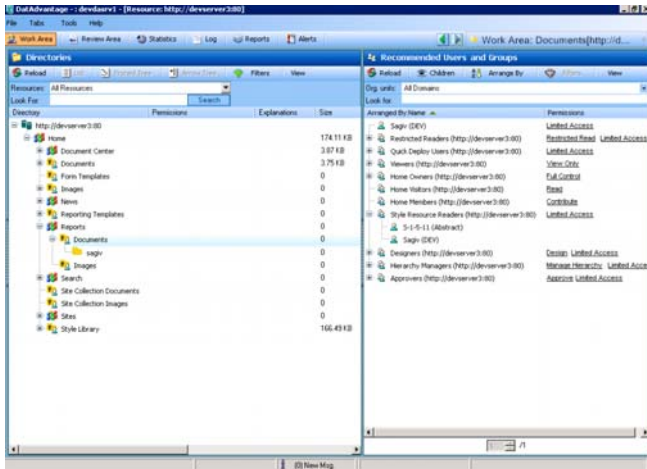

CHALLENGE

Many organizations have turned to Microsoft SharePoint, using it as both a repository and an interactive workspace for their unstructured data assets. Despite the many services SharePoint provides for data management, ensuring proper access control over critical business data remains a challenge in SharePoint. Who has access to data, who is accessing the data, and who should have their access revoked remain difficult questions to answer.

SOLUTION

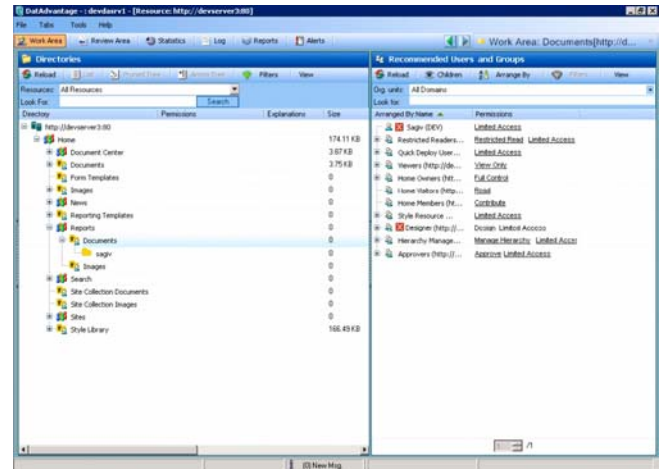

Varonis® DatAdvantage® for SharePoint provides the visibility, auditing and recommendations you need to take control of your SharePoint deployment. DatAdvantage shows how SharePoint permissions and permission levels are defined and used in your environment today so that you can see who currently has access to information. DatAdvantage also monitors every data access made by each user, so you can see who is accessing data. And, to help you reduce overly permissive access, DatAdvantage makes recommendations for each data set about who should have their access revoked. In short, DatAdvantage provides greater control over access to SharePoint data through:

- Unparalleled visibility of SharePoint permissions and permissions levels
- A complete data access audit trail
- Recommendations about whose access should be revoked

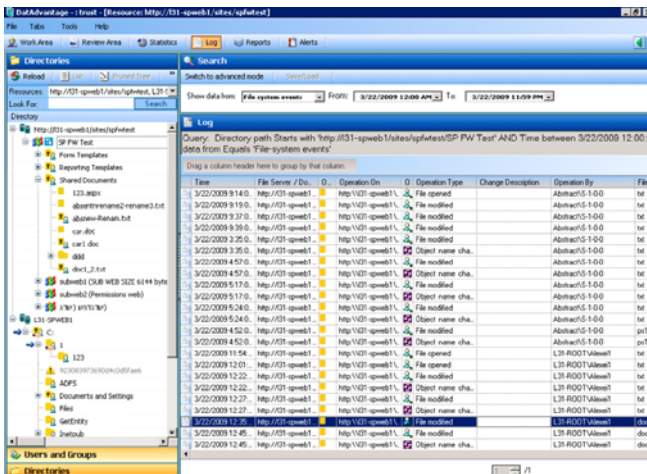

SHAREPOINT PERMISSIONS VISIBILITY

With Varonis DatAdvantage, you can click on any SharePoint site, list, folder, etc., and instantly see which groups and users have access.

RECOMMENDATIONS

Through a comprehensive analysis of users, groups, permissions and actual data access, DatAdvantage is able to make highly accurate recommendations for each data set about whose access should be revoked.

CONTINUOUS AUDIT

A detailed audit log of each time someone creates, opens, renames, deletes or changes the permissions of SharePoint data. You can search, sort and report on this information to find what you are looking for and communicate your findings.
